SUMMARY

Full-Stack Software Engineer working on a production multi-tenant SaaS platform for tax and accounting firms. Experience spans frontend and backend development, database design and optimisation, authentication and security, cloud deployment and CI/CD, reporting and workflow systems, and desktop application automation. Comfortable owning a feature from the interface through the API and database to the infrastructure it runs on.

EXPERIENCE

Software Engineer — BFirst

Current

AccuMax — Multi-Tenant Tax & Accounting SaaS Platform

- Built and enhanced full-stack features across Angular and React frontends and Node.js / Python backend services on a multi-tenant platform serving client, CPA, admin and internal team portals.
- Developed workflow, task, document, notification, reporting and billing capabilities.
- Implemented authentication and security capabilities including MFA/TOTP, role-based access control, refresh-token rotation and secure cookie handling.
- Built MongoDB aggregation pipelines and reporting APIs powering operational dashboards and data exports.
- Worked on application performance, caching and database-performance investigation for high-volume workflow data.
- Built GitHub Actions and Azure deployment workflows across multiple application environments.
- Developed automation and integration workflows connecting the platform to desktop tax preparation software.

Stack: Angular · React · TypeScript · Node.js · Python · MongoDB · Azure · GitHub Actions · .NET 8 · REST APIs

SELECTED PROJECTS

Tax Entry Automation

.NET 8 · C#

Bridging structured tax data with desktop tax preparation software

- Built a Microsoft UI Automation-based system that writes structured tax data into desktop tax preparation software that exposes no API — driving the application through its own UI automation tree rather than OCR.
- Implemented screen discovery and UI hierarchy inspection, reusable screen definitions, and positive screen identification before any value is written.
- Handled business-field mapping, value transformation into target formats, masked and constrained inputs, and post-write verification of entered values.

Stack: .NET 8 · C# · Microsoft UI Automation · JSON · Field Mapping · Screen Identification · Data Transformation

Real-Time Hospital Analytics

Python · Django

Operational dashboards with live updates and patient-level drilldowns

- Built an analytics dashboard for hospital operations with interactive visualisations and real-time updates delivered over WebSockets.
- Implemented patient-level drilldowns from summary views and operational reporting assembled with Pandas, replacing manual Excel-based reporting.

Stack: Python · Django · Streamlit · WebSockets · Chart.js · Pandas

AI Trip Planner

React · Gemini AI

AI-generated itineraries with a fast, responsive interface

- Built a React application that turns trip inputs into structured itineraries using the Gemini API, with Firebase for data and application state.
- Handled API integration, response processing and a responsive interface.

Stack: React · Tailwind CSS · Firebase · Gemini AI

E-Commerce Platform & News Application

MERN · Flutter

- Full-stack storefront covering product catalogue, cart, checkout flow and order handling on a REST API backend (React, Node.js, Express, MongoDB).
- Cross-platform mobile news client with category browsing and article views over a live news API (Flutter, Dart).

TECHNICAL SKILLS

Frontend	React, Angular, TypeScript, JavaScript, Next.js, Tailwind CSS, HTML, CSS
Backend	Node.js, Express, NestJS, Python, Django, REST APIs
Databases	MongoDB, PostgreSQL, MySQL, Redis
Cloud & DevOps	Microsoft Azure, Azure App Service, GitHub Actions, CI/CD, Docker
Security	Authentication, MFA / TOTP, RBAC, JWT, Refresh Token Rotation, API Security
Automation & AI	Microsoft UI Automation, Workflow Automation, Generative AI, OpenAI, Gemini, API Integrations

EDUCATION

Master of Computer Applications (MCA) — Atria Institute of Technology	CGPA 7.7
Bachelor of Computer Applications (BCA) — KLE'S College of BCA RLSI, Belagavi	CGPA 7.4
